

# Provider Schedule & Attendance Tracker

A provider-facing page that shows the practice/office their scheduled patients and allows them to mark whether each patient showed up or not.

## Page Layout

Practice: Acme Family Medicine  
Date: [< May 5, 2026 >] (navigable date picker)

| Time     | Patient       | Showed | No-Show |
|----------|---------------|--------|---------|
| 9:00 AM  | John Smith    | [x]    | [ ]     |
| 9:30 AM  | Maria Garcia  | [ ]    | [x]     |
| 10:00 AM | David Lee     | [ ]    | [ ]     |
| 10:30 AM | Sarah Johnson | [x]    | [ ]     |
| 11:00 AM | James Wilson  | [ ]    | [ ]     |
| 11:30 AM | Amy Chen      | [ ]    | [ ]     |

Summary: 2 showed | 1 no-show | 3 pending

## Design Decisions

- Access control:

Login-based (not token URLs) since this is a repeated-use tool
- Granularity:

One page per practice location
- Date navigation:

Default to today; allow navigating to past days (read-only after X days)
- Save behavior:

Auto-save on each toggle - no Save button needed, less friction for busy staff
- Data source:

TBD - pushed from our system, or pulled from EHR?
- Attendance data usage:

Record attendance; optionally trigger follow-up workflows for no-shows
- Patient info shown:

Minimal: time, name, toggle. No PHI beyond what is needed.
- Device support:

Desktop + tablet friendly (responsive)

## Recommendation

- Auto-save on each toggle (no Save button) for minimal friction
- Login-based auth since this is a daily-use tool, not one-time
- Default to today, allow past-day navigation (read-only after 48 hours)
- Keep it minimal: time, patient name, showed/no-show toggle

- Mobile/tablet responsive for front desk use
